Agricultural inspection

Agricultural product trade is always dynamic. F.I.S's range of inspection services make certain that the quality and quantity of your cargo is within an acceptable standard range during every stage of the supply chain, and ensure they reach the final destination in accordance with the parameters of your contract.

Services

- Quality and quantity control
- Pre-shipment Inspection
- Inspection at load port and issuance of COI
- Testing and witness of test

In agriculture field, we are focusing in jute yarn and have a professional team in Iran and in Bangladesh who support us to inspect imported and exported goods. Our team are cooperating with RIK experts in jute inspection who has more than 2 years' experience in the field.

Services for raw jute

On behalf of buyers, shippers and sellers, we offer a pre-shipment service that includes supervising the stuffing of containers within the port premises and testing the moisture content of the jute. We also perform the following inspections:

- Containers
- Packing/markings
- Quality
- Quantity/weight

Services for jute goods

We offer a range of services on finished articles containing jute:

- Quality/quantity inspection
- Final random inspections once goods are ready for shipment
- Random sampling of packed goods
- Quality assurance (offered directly to the mills for jute yarn, cloth and bags)
- Regular checking on quality parameters
- Reduces the number of manufactured goods that are rejected
- Stuffing supervision
- Verification of quantity shipped

- Testing
- Witnessing of test analysis in manufacturing mills, as required
